Re: Imploration of Peter Thiel Resignation, Palantir Technologies Board of Directors

Dear Palantir Board of Directors:

Today's memo implorates the resignation of Mr. Peter Thiel from the Board of Directors of your esteemed organization.

- Reasonable expectations support this resignation on or before Monday February 14, 2022 at Noon EST.
- Failure in the resolution of the resignation concerned may be a threat to xNY.io's international enterprise (detailed below).
- Simple logic behind our request coincides with the [February 7, 2022, 4:07 PM EST](#) Bloomberg News report of Mr. Thiel's resignation from Meta's Board of Directors.

Bank.org

xNY.io

New York, New York 10001

Bloomberg cited that Mr. Thiel plans to explore political endeavors that perhaps would be a conflict of interest to sacred Board Director entitlement responsibilities.

Speaking honestly and transparently, Palantir's Board of Directors must embody the similarly sacred fact of seeking various high level Blanket Purchase Agreements (BPA) with the United States of America. For example xNY.io submits that the FBI's work in New York City has coined "Gotham" under a Palintir contract.

- **Researching details for this memo today, xNY.io further shares [USAspending.gov's near \\$30M BPA](#) contract with Palantir for FBI systems and processes software architecture.**
- **Given the example and reasoning behind Mr. Thiel's resignation as a Meta Director, how can Palintir justify his serving as a Director of your firm?**

Full, fair, and accurate disclosures from all parties in a battle for corporate influence or control are critically important to investors, particularly when they are called upon to make decisions about their investments. Contemporary crypto computer crimes likely are key considerations relevant to making informed investment decisions by sophisticated investors, underscoring protection of pension assets via keen planning.

From xNY.io's perspective, Mr. Thiel may be aware of New York BitLicense marketplace manipulation techniques and potential cross-border computer crimes. This has been a major focus of xNY.io's scholar research/innovation communication and our business plan execution strategy.

- The World Bank ([WorldBank.org](#)) notes that vulture funds endanger the gains made by debt relief to poorest countries. "The Bank has already delivered more than \$40 billion in debt relief to 30 of these countries...thanks to this, countries like Ghana can

provide micro-credit to farmers, build classrooms for their children, and fund water and sanitation projects for the poor," wrote World Bank Vice President Danny Leipziger in 2007.

- World Bank directors warn that strategies adopted by vulture funds divert much needed debt relief away from the poorest countries on earth and into the bank accounts of the wealthy.
- xNY.io is concerned Mr. Theil is not clear-eyed; ignoring that via Meta and PayPal microcredit lending fraud has been a major issue for developing economies.

Likewise, in Western developed economies, market history warns that when boards of directors approve of and/or ignore the misuse of computer software programs which compute values based upon data input formulas from active cross-border manipulation structures, the results can lead to scandals like Enron. Such outcomes cost investors billions of dollars when the share prices of affected companies collapse, while also shaking public confidence in the United States securities markets.

Enron's Board of Directors: Contemporary Lessons on Crypto Marketplace Manipulation Computer Crimes

In its 2000 review of best corporate boards, Chief Executive Magazine included Enron among its five best boards. Even with its complex corporate governance and network of intermediaries, Enron was still able to "attract large sums of capital to fund a questionable business model, conceal its true performance through a series of accounting and financing maneuvers, and hype its stock to unsustainable levels." On paper, Enron had a model board of directors comprised predominantly of outsiders with significant ownership stakes and a talented audit committee of various state and federal regulators.

Two decades later, in 2021, it is clear that cryptocurrency and blockchain computer software systems require contemporary, ethically pure and sound cultivation to support the realization of a "generation of innovation," maximizing the full potential of blockchain software technologies.

Board directors that will pioneer the next chapters of the meaningful New York legacy of global, cross-border banking will agree:

- Close scrutiny of corporate governance and greater responsibility placed on directors to vouch for the reports submitted to the SEC and other federal agencies have resulted in the growth of computer software solutions such as blockchain systems and processes.
- Cryptocurrency and Blockchain computer software products allow corporate directors and internal auditors to assemble and analyze financial and other relevant data—including unstructured data—and create reporting required by New York BitLicense regulators and various Federal counterparts.
- Before its demise, Enron was lauded for its sophisticated software, including financial risk management tools powered by computer software.
- Risk management was crucial to Enron not only because of its regulatory environment, but also because of its business plan. Enron established long-term fixed commitments which needed to be hedged to prepare for the invariable fluctuation of future energy prices.
- Enron's downfall was attributed to its reckless use of derivatives and special purpose formulas manipulated by computer accounting software tools. To engage in probable computer crimes, Enron hedged its risks with special purpose entities which it owned, and Enron retained the risks associated with the transactions.

Enron's aggressive accounting practices were not hidden from the board of directors, as later learned by a Senate subcommittee. The board was informed of the rationale for using the Whitewing, LJM, and Raptor transactions, and after approving them received status updates on the entities' operations. Although not all of Enron's widespread improper accounting practices were revealed to the board, the practices were dependent on board decisions.

Eliminating Bad Board of Director Schemes

Palantir Technologies perhaps may understand xNY.io's overall concern of Mr. Theil's Meta resignation. Meanwhile, xNY.io cannot logically accept that Palantir's Gotham technology (with Mr. Theil serving as a Palantir Director) is not being manipulated at our overall expense.

Failure to meet the recommended deadline of Monday February 14, 2022 at Noon EST, may signal great concern in need of further investigation of Palantir Technologies computer crime conspiracies. The Board of Directors at Palantir must understand xNY.io's approach to Gotham software purity.

Seemingly, Meta's Board embodied similar, logical approaches.

Published by the Office of Legal Education Executive office for United States Attorneys, the "Prosecuting Computer Crime Manual" has been xNY.io's reference guide as international scholars researching Crypto Computer Crimes and how to best position corresponding Bank.org business innovation moving forward.

[Here we share 183 highlights](#) to the Computer Crimes Manual as per best disclosure practices to illustrate various potential scenarios when market conditions are met and a board of directors potentially exploits blockchain technological software innovation with forecastable reckless consequences.
