***Re: Palantir Technologies Board of Directors - Computer Crimes and Securities
Fraud***

Dear Palantir Board of Directors:

You have yet to respond to xNY.io's [February 8, 2022 memo concerning](#) a reasonable request for the resignation of Mr. Peter Thiel from the Board of Directors of your esteemed organization. Making matters worse, Palantir's Board of Directors failed to respond to xNY.io's [February 18, 2022 memo urging](#) Palantir's Board of Directors to act in resonance with the law.

- [Today's correspondence](#) mints xNY.io's overall concern of being victim to Palantir's Board of Directors conspiracy to commit Computer Crimes and Securities Fraud.
- xNY.io has made [185 highlights to the Prosecuting Computer Crimes Manual](#), issued by the DOJ Computer Crime and Intellectual Property Section Criminal Section.

- xNY.io has made [85 highlights to the FDIC's Office of Inspector General's investigation](#) outlining Palantir's Board of Director's likely exploiting vulnerabilities in your system to conduct malicious cyber activities.
- xNY.io now has logical concern of [active Securities Fraud](#) sponsored by Palantir's Board of directors that may be a threat to xNY.io's international enterprise (chart detail below).

Seemingly, Meta's Board of Directors (FB) embody xNY.io's similar, logical approach.

Three month chart: PLTR has lost -42.54%, FB lost -37.59% and DWAC gained +126.62%

Securities fraud, also known as stock fraud and investment fraud, is a deceptive practice in the stock or commodities markets that induces investors to make purchase or sale decisions on the basis of false information, frequently resulting in losses, in violation of securities laws.

Securities fraud can also include outright theft from investors, [stock manipulation](#),

misstatements on a public company's financial reports, and lying to corporate auditors. The term

encompasses a wide range of other actions, including [insider trading](#), [front running](#) and other illegal acts on the trading floor of a stock or commodity exchange.

Eliminating Bad Board of Director Schemes

Full, fair, and accurate disclosures from all parties in a battle for corporate influence or control are critically important to investors, particularly when they are called upon to make decisions about their investments. Contemporary crypto computer crimes likely are key considerations relevant to making informed investment decisions by sophisticated investors, underscoring protection of pension assets via keen planning.

Board directors that will pioneer the next chapters of the meaningful New York legacy of global, cross-border banking will agree:

- Close scrutiny of corporate governance and greater responsibility placed on directors to vouch for the reports submitted to the SEC and other federal agencies have resulted in the growth of computer software solutions such as blockchain systems and processes.
- Cryptocurrency and Blockchain computer software products allow corporate directors and internal auditors to assemble and analyze financial and other relevant data—including unstructured data—and create reporting required by New York BitLicense regulators and various Federal counterparts.
- Before its demise, Enron was lauded for its sophisticated software, including financial risk management tools powered by computer software.
- Risk management was crucial to Enron not only because of its regulatory environment, but also because of its business plan. Enron established long-term fixed

commitments which needed to be hedged to prepare for the invariable fluctuation of future energy prices.

- Enron's downfall was attributed to its reckless use of derivatives and special purpose formulas manipulated by computer accounting software tools. To engage in probable computer crimes, Enron hedged its risks with special purpose entities which it owned, and Enron retained the risks associated with the transactions.

Enron's aggressive accounting practices were not hidden from the board of directors, as later learned by a Senate subcommittee. The board was informed of the rationale for using the Whitewing, LJM, and Raptor transactions, and after approving them received status updates on the entities' operations. Although not all of Enron's widespread improper accounting practices were revealed to the board, the practices were dependent on board decisions.

Palantir Technologies perhaps may understand xNY.io's overall concern of Mr. Thiel's Meta resignation. Meanwhile, xNY.io cannot logically accept that Palantir's Gotham technology (with Mr. Theil serving as a Palantir Director) is not being manipulated at our overall expense.

Respectfully yours with appreciation,
